

MEDICAL SHIELDING ACCESSORIES SUITESENTRY

ETS-Lindgren's SuiteSentry™ Systems set the standard in advanced ferromagnetic detection systems (FMDS), offering unparalleled safety for your entire MRI Suite. Specifically designed to empower technologists with complete control of both the interior and exterior of the MRI room, SuiteSentry Systems meet the American College of Radiology (ACR) and The Joint Commission's mandate to maintain "control of Zone IV at all times." By partnering with our safety experts, you'll achieve optimal functionality, improved operational efficiency, and enhanced compliance with ACR and Joint Commission guidelines.

SuiteSentry takes proactive safety to the next level by alerting staff to the approach of ferromagnetic materials into Zone IV well before they reach the threshold. Highly visible warning lights are designed for maximum visibility both inside and outside the MRI room, activating earlier as the threat level increases. An audio alarm provides an additional layer of security but only sounds if the threat reaches the threshold.

The patented SuiteSentry technology eliminates false alarms by focusing exclusively on ferromagnetic threats attempting to enter the MRI room, ignoring surrounding disturbances. Equipped with 24 sensors and 18 detection zones, the system delivers uniform sensitivity and exceptional reliability.

Thoughtfully engineered for all facility layouts, SuiteSentry adapts seamlessly to different architectural designs. For MRI doors that swing outward, the unit is mounted on the interior door frame, while for inward-swinging doors, it's installed on the exterior. This flexibility prevents the common issue of door obstruction, ensuring uninterrupted functionality—particularly important given that 85% of MRI doors swing outward.

For enhanced compliance and incident management, SuiteSentry offers an optional Ferromagnetic Incident Log Manager (FILM). This feature supports Joint Commission standards and assists with root cause analysis by automatically capturing a visual record of potential and actual projectile incidents, as well as post-incident conditions. With SuiteSentry, you gain advanced safety, operational efficiency, and peace of mind for your MRI Suite.

SUITESENTRY

- **Enhanced Control of MRI Suite, Including Staff Inside**
- **24 sensors/18 Detection Zones for Increased Sensitivity & Reliability**
- **Earlier Warning for Both In- and Out-of-Room Staff**
- **Precisely Locates Exact Area of Ferrous Threat**
- **Reduces Alarm Fatigue by Using a Visual Alert System**
- **Thoughtfully Designed for Flexible Installation, No Door-swing Blockage**
- **Optional Ferromagnetic Incident Log Manager (FILM)**
